

Product Line

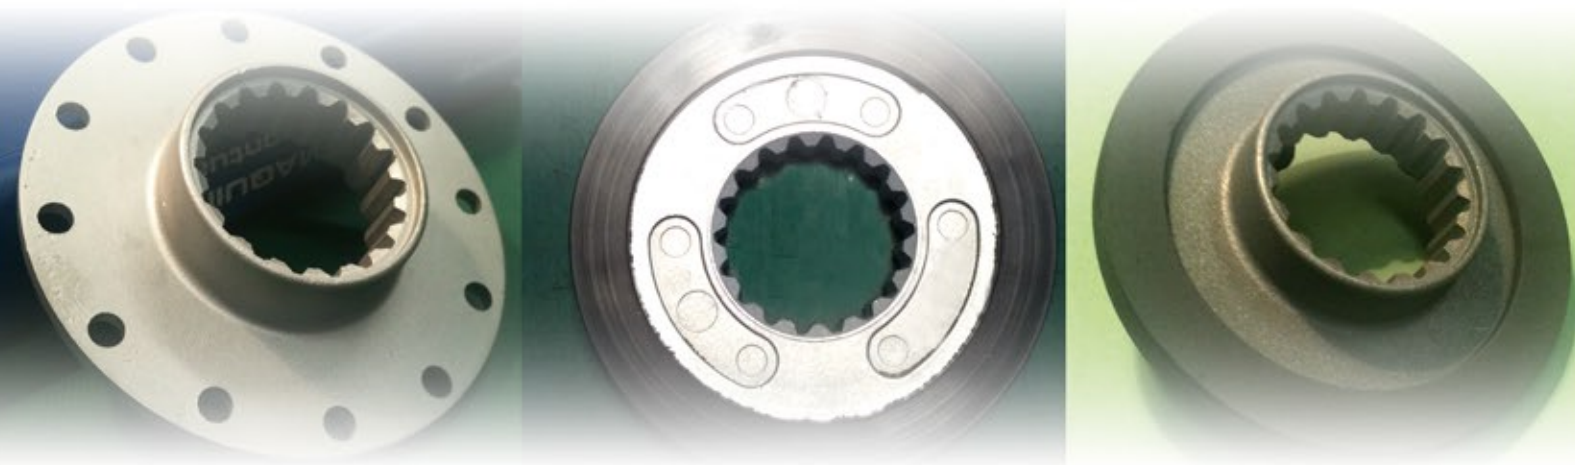

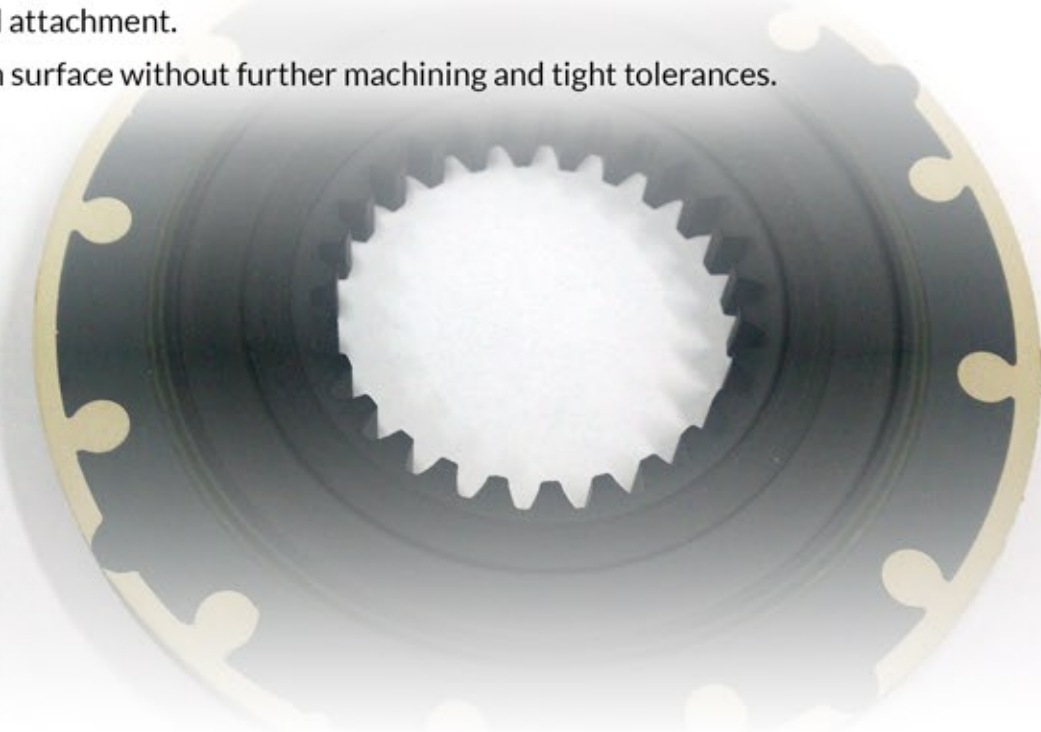

1.- Friction Materials

Friction material transformation by compression, injection and transfer. Own formulations.

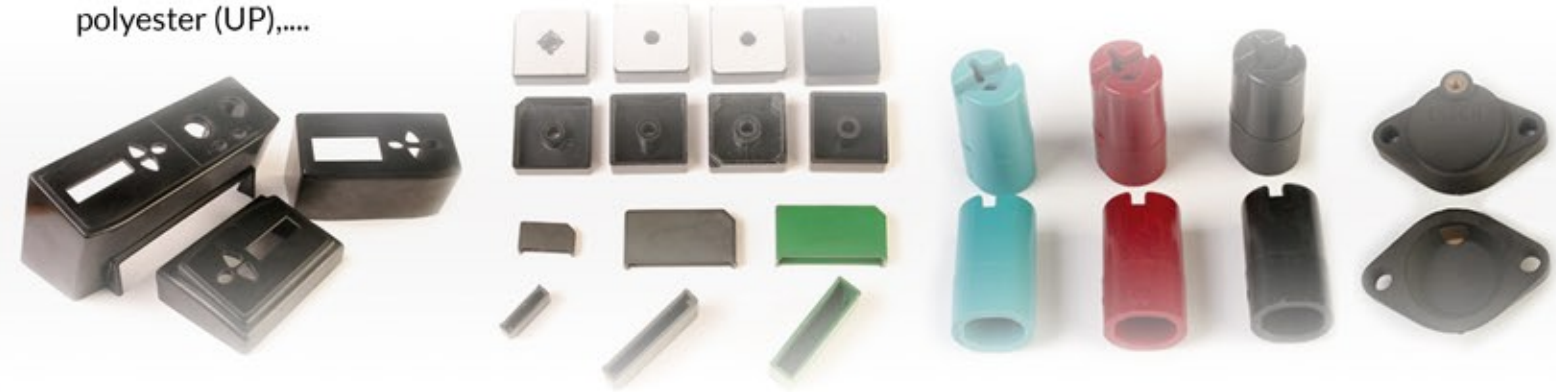

Exclusive overinjection system for metal and thermosetting supports with chemical and mechanical attachment.

Excellent finish surface without further machining and tight tolerances.

2.- Thermosetting Moulding For Engineering

Transformation of thermosetting materials such as epoxi (EMC), phenolic (PF), melamine (MF), polyester (UP),....

3.- Composites

Textile with epoxi matrix, for high performance components.

4.- Elastomers

Specific formulation for all kind of applications.

Rubber-metal union. Fluoride-elastomers.

R&D

Customized solutions.

Close collaboration for your projects.

Working prototypes. Competitive prices.
